

### Globe valves, 3-way, with flange PN16

- For closed cold and hot water systems
- For modulating water-side control of air handling units and heating systems

# Type overview

Туре	K <sub>vs</sub>	DN	Stroke	Sv	$ riangle \mathbf{P_s}$		
	[m <sup>3</sup> /h]	[mm]	[mm]		[kPa]		
H7065W-S*	50	65	20	>50	280		
H7080W-S	80	80	30	>50	250 / 300		
H7100W-S	125	100	40	>50	200 / 450		
H7125W-S	200	125	40	>50	110 / 250		
H7150W-S	300	150	40	>50	60 / 150		
H7200W-S	520	200	40	>50	130		
H7250W-S	750	250	40	>50	50		

 $\bigtriangleup P_{s}$  will be variant depends on actuator selection.

\*H7065W-S is available for diverting application.

### **Technical data**

Functional data	Flow media	Cold and hot water, Refrigerant (R12, R22, R134a, R202), water with max. 50% volume of glycol, Hydrazine, Phospha					
	Temperature of medium	0°C +150°C					
	Rated pressure Ps	1600kPa (PN16)					
	Flow characteristic	Control path A–AB, B-AB: equal percentage (to VDI/VDE 2173) n(gl) = 3, optimised in the opening range					
	Rangeability S <sub>v</sub>	See «Type overview»					
L F	Leakage rate	Max. 0.02% of kvs value on all path (DIN EN 1349 and DIN EN 60534-4)					
	Pipe connection	Flange to ISO 7005-2 (PN16)					
	Stroke	See «Type overview»					
	Valve closing point	Up (▲)					
	Installation position	Upright to horizontal (in relation to the stem)					
	Maintenance	Maintenance-free					
Materials	Body	Ductile iron GGG40					
	Valve cone	Stainless steel SS304					
	Valve stem	Stainless steel SS630					
	Valve seat	Stainless steel SS304					
	Stem gland seal	Teflon					
Dimensions / Weights	Dimensions and weights	See «Dimensions and weights»					

Safety notes

Pro

 This globe valve has been designed for use in stationary heating, ventilation and air-conditioning systems and is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.

- It may only be installed by suitably trained personnel. All applicable legal or institutional installation regulations must be complied with.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- The recognised rules should be applied when determining the flow characteristic of final controlling elements.

roduct features	
Mode of operation	The globe valve is operated by an SV, EV or RV series linear actuator. The linear actuators are controlled by a standard modulating or 3-point control system and move the cone of the valve, the throttling device, to the opening position dictated by the control signal.
Flow characteristic	An equal-percentage flow characteristic is produced by profiling the valve cone. The bypass exhibits a linear characteristic curve.
Manual operation	On the SV, EV or RV linear actuator, the valve stem can be actuated manually using a hexagona key.

#### Installation notes

Recommended mounting positions	The globe valve may be mounted either vertically or			
	horizontally. It is not permissible to mount the globe valve with the stem	9		
	It is not permissible to mount the globe valve with the stem pointing downwards.			

Water quality requirements

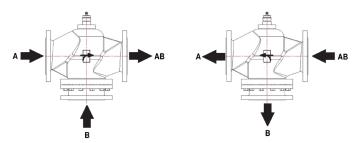

- The water quality requirements specified in VDI 2035 must be adhered to.
- Globe valves are relatively sensitive control devices. In order to ensure a long service life, it is advisable to fit **strainers.**

Maintenance

**Direction of flow** 

- The globe valves and linear actuators are maintenance-free.
- Before any kind of service work is carried out on actuator sets of this type, it is essential to isolate the linear actuator from the power supply (by unplugging the power lead). Any pumps in the part of the piping system concerned must also be switched off and the appropriate isolating fittings closed (allow everything to cool down first if necessary and reduce the pressure in the system to atmospheric).
- The system must not be returned to service until the globe valve and the linear actuator have been properly reassembled in accordance with the instructions and the pipework has been refilled in the proper manner.

 The direction of flow, specified by an arrow on the housing, is to be complied with, since otherwise the globe valve can be damaged.

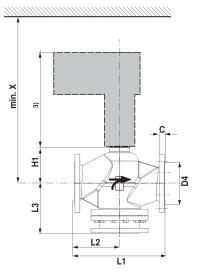

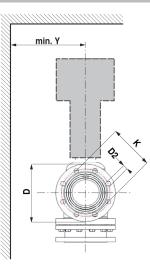

10.2015 • Subject to modification
